## Message from IEEE AINA 2017 General Co-Chairs

It is our great pleasure to welcome you all at the 31-st IEEE International Conference on Advanced Information Networking and Applications (IEEE AINA 2017), which will be held at Tamkang University, Taipei, Taiwan from March 27 to March 29, 2017.

IEEE AINA International Conference is a forum for sharing ideas and research work in the emerging areas of information networking and their applications. The area of advanced networking has grown very rapidly and the applications around it have experienced an explosive growth especially in the area of pervasive and mobile applications, sensor networks, ad-hoc networks, vehicular networks, multimedia computing and social networking, semantic collaborative systems, as well as Grid, P2P, IoT and Cloud Computing. This advanced networking revolution is transforming the way people live, work, and interact with each other, and is impacting the way business, education, entertainment, and health care are operating. The papers included in the proceedings covers theory, design and application of computer networks, distributed computing and information systems.

Each year AINA receives a lot of paper submissions from all around the world. It has maintained high quality accepted papers and is aspiring to be one of the main international conferences on the Information Networking in the world. In conjunction with IEEE AINA 2017 conference there are 13 workshops, which also accepted high quality papers.

An international conference of this size requires the support and help of many people. A lot of people have helped and worked hard to produce a successful IEEE AINA 2017 technical program and conference proceedings. First, we would like to thank all authors for submitting their papers, the session chairs and distinguished keynote speakers. We are indebted to Program Area Chairs, Program Committee Members and reviewers, who carried out the most difficult work of carefully evaluating the submitted papers.

We would like to give our special thanks to Prof. Makoto Takizawa and Prof. Leonard Barolli, Co-Chairs of the Steering Committee for their strong encouragement, guidance and insights, and for spending a lot of energy for conference organization and shaping the conference program. We would like to thank PC Co-Chairs and Workshops Co-Chairs of AINA 2017 for their great contribution to the success of the conference. Our special thanks go to Makoto Ikeda as Finance Chair, and Shinji Sakamoto and Donald Elmazi as Web administrators.

## **Message from IEEE AINA 2017 Program Committee Co-Chairs**

Welcome to the 31-st IEEE International Conference on Advanced Information Networking and Applications (IEEE AINA 2017), which will be held at Tamkang University, Taipei, Taiwan from March 27 to March 29, 2017.

The purpose of AINA conference is to bring together researchers, developers, and industrial experts to share new ideas and recent research results in the emerging areas of information networking and their applications. Nowadays, networks are going through a rapid evolution. The papers included in the proceedings cover all aspects of theory, design, and application of computer networks and distributed computing systems. Most of the papers deal with new trends in information networking, such as wireless sensor networks, ad-hoc networks, cloud computing, peer-to-peer systems, grid computing, pervasive and ubiquitous systems, multimedia systems, security, multi-agent systems, IoT and web-based systems.

This edition AINA received 561 paper submissions from all over the world. Each submission was peer-reviewed by program committee members or invited external reviewers. Finally, the program committee accepted 157 papers (about 28% acceptance ratio), which will be presented during the conference days. Unfortunately, many interesting and good papers could not be accepted in IEEE AINA 2017 due to the limited number of time slots allocated for presentations at the conference.

We are very proud and honored to have two distinguished keynote talks by Prof. Prof. Wanjiun Liao, National Taiwan University, Taiwan and Prof. Joseph Ng Hong Kong Baptist University, Hong Kong, who will present their recent work and will give new insights and ideas to the conference participants.

Organizing an international conference of this size is of course a team effort. Therefore, we gladly admit that we had the help of many very professional people. First of all, we would like to thank all the authors for their interesting contributions since they shape the program and make it interesting for the audience. Moreover, we would like to express our thankfulness to all program-vice chairs for their great efforts. Additionally, we would like to thank all program committee members and reviewers who carried out the most important work to evaluate the submitted papers. We also thank the Workshops Co-Chairs for organizing many excellent workshops and symposiums, which enrich the conference and provide additional opportunities for discussions and future co-operations.

The great success of the AINA conference series would not be possible without the enormous commitment and support of the steering committee co-chairs Prof. Makoto Takizawa and Prof. Leonard Barolli. Therefore, we would like to thank them for their strong encouragement and guidance.

The general coordination of an event such as AINA conference requires a lot of coordination effort as well as many other activities related to the conference organization. Here, we thank the General Co-Chairs for their great support and invaluable suggestions. We give special thanks to Makoto Ikeda, Shinji Sakamoto and Donald Elmazi for their great efforts and efficient work to deal with many conference matters.

We hope you will enjoy the conference and readings and have a great time in Taipei, Taiwan.

### **Toward Green Wireless Networks: Computing, Caching, and Communications**

**Abstract:** Energy savings in cellular systems is increasingly important due to ever-deteriorating global warming. Heterogeneous networks (HetNets) composed of multiple tiers of cells can attain energy savings thanks to the lower operational and transmit power consumptions of small cells. To address the inter-cell interference problem while achieving network energy conservation, multicell cooperation facilitating cooperative transmission and sleep mode operation paves the way toward future green HetNets. To further alleviate the backhaul power consumption induced by cooperative transmission, proactively caching popular contents locally is regarded as a viable solution. In this talk, we will explore how energy-aware multicell cooperation in HetNets with content caching can be achieved, and we show that the place-then-transmit strategy is optimal to this problem. We will then talk about how green multicell cooperation and shareable caching in HetNets can be facilitated, and propose to solve it via a connect-then-cache strategy. Both of the above two problems are NP-hard; therefore, we are motivated to design approximate solutions and show that the achieved total power consumption can be upper-bounded. Finally, we show that our proposed solutions yield near-optimal total power consumption, and the impacts of content popularity and cache size on the energy-saving performance for green HetNets.

### **An Indoor Location Analytics System for Exhibition and Convention Industries in a Smart & Open City**

**Abstract:** For the past 40 years, the advance in computing has gone from traditional computation and data processing to location-based applications & services for pervasive/ubiquitous computing. Together with the advancement in networking, IoT, and Big Data Analysis, we are all projecting that we are about to get into a new era of computing by the concept of Ubiquitous Intelligent Community years – Smart City.

In Hong Kong, we agreed that a Smart City should emphasis on leveraging Information and Communications Technology to enhance the efficiency of a city’s systems, operations and services. But we also want to add user-centric and the degree of openness to the available services and data such that a Smart & Open City shall leverage human and social capital to facilitate the sustainable growth of the community and improve the quality of living. Hence, for the first part of the talk, we will describe the Smart City Projects and The Open City initiatives in Hong Kong. And in the latter part, we will talk about our recent research and development, under the Smart City framework, in merging two of the more important technologies – localization & tracking and big data analysis and put into practical use.

In the exhibition and convention industry, the more information and data you have about the visitor, the more likely you will succeed in your marketing strategy. And thus, the Indoor Location Analytics System (ILAS) is developed for better matchmaking between buyers and exhibitors in the exhibition industry. ILAS consists of 3 major components: 1) an indoor positioning system which use both Wifi-based and Mobile network based approaches to identify visitors’ location information, 2) a backend analytics system which combines the content-based recommendation and collaborative filtering approach for robust identification of visitors’ preference for enabling value-added services provisioning, and 3) a mobile apps allowing the system to communicate with the visitors to provide a just-in-time and personalized information according to the visitors’ current location. The proposed system adds values and opportunities to different stakeholders in the Exhibition and Convention Industry. On one hand, reducing the matchmaking cost between the buyers and exhibitors can enhance their levels of satisfaction. Also, based on the collected data, the backend analytics system can analyze the visitor flow patterns to provide decision support to the exhibition organizers for better venue design and booth pricing strategy. Furthermore, the introducing of “Femtocell” technology in the proposed solution allows seamless transition of mobile basestations from outdoor to indoor. It not only improve the positioning accuracy, but also opens up an opportunity to link up with mobile service providers for new business models like mobile advertisement and marketing.
