

TABLE OF CONTENTS

LIST OF FIGURES	VII
LIST OF TABLES	XI
Chapter 1 Introduction.....	- 1 -
1.1 Routing problems in DTNs and Motivation	- 2 -
1.2 Contributions	- 3 -
1.3 Thesis Structure	- 4 -
Chapter 2 Related Works	- 5 -
2.1 Introduce the wireless Ad Hoc Networks	- 5 -
2.1.1 The concepts and features in MANET.....	- 5 -
2.1.2 The applications in mobile ad hoc network	- 8 -
2.1.3 The major research institutions and new application areas in mobile ad hoc network.....	- 10 -
2.2 The routing protocols in mobile ad hoc network)..	- 11 -
2.3 The concepts and features in DTNs.....	- 16 -
2.3.1 The problems in DTNs	- 16 -
2.3.2 Applications must be afraid of delay in DTNs....	- 17 -
2.3.3 Applications and features in DTNs.....	- 18 -
2.3.4 The application of common features and characteristics in DTNs.....	- 20 -
2.3.5 The simple classification based on different numbers of copy messages in DTN	- 22 -
2.4 The routing algorithm in DTNs	- 23 -
2.4.1 "Direct Transfer" routing method and wireless sensor networks	- 23 -
2.4.2 First contact routing and two-hop routing	- 24 -
2.4.3 The exchange mechanism in epidemic routing...	- 25 -
2.4.4 Probability associated with the routing protocol.	- 26 -
2.4.5 Adapter mechanism associated routing.....	- 27 -
2.4.6 Compare the flooding problems between MANETs and the epidemic routing in DTNs	- 28 -
2.4.6.1 The differences in scenarios.....	- 28 -
2.4.6.2 The differences in methods.....	- 29 -
2.4.6.3 There are different present for broadcast storm	

problem.....	- 29 -
2.4.6.4 The metrics are different.....	- 30 -
2.4.6.5 The major problems occur in Epidemic DTN-routing	- 30 -
Chapter 3: From the viewpoints of distributed system to discuss the routing problem and the design idea of this thesis	- 32 -
3.1 The CAP Theorem in distributed system	- 32 -
3.2 Attention to Availability and Partition Tolerance...	- 34 -
3.3 Multi-copy, consistency, single-copy and Head-of-Line blocking problems.....	- 36 -
3.3.1 Multi-copy and don't need consistency problem	- 36 -
3.3.2 Resolve the single-copy and HOL problems	- 36 -
3.3.3 The interesting issues between single-copy and multi-copy	- 38 -
Chapter 4 OOP and OOPFE-Routing Scheme.....	- 39 -
4.1 OOP-Routing Scheme	- 39 -
4.1.1 The 1'st step, OB (One Broadcast) process	- 40 -
4.1.2 The 2'nd step, OC (One Copy) process	- 41 -
4.1.3 The 3'rd step, PS (Persistent Storage) process ...	- 41 -
4.2 OOPFE-Routing Method	- 41 -
4.3 The algorithm of OOPFE-Routing.....	- 42 -
4.3.1 Algorithm-part A: Processing the received packet.....	- 42 -
4.3.2 Algorithm-part B: Achieve anti-entropy session.	- 45 -
Chapter 5 Network Simulator, Visualization tools and Mobile pattern generator.....	- 46 -
5.1 About NS2	- 46 -
5.2 NS2 wireless simulator architecture	- 48 -
5.3 The process flow of NS2	- 49 -
5.4 The usage of NS2.....	- 50 -
5.5 The visualization tools: Nam	- 51 -
5.6 Random Waypoint Model mobility generator inNS2.....	- 52 -
5.6.1 Mobile Mobility.....	- 52 -
5.6.2 The Mobile Mobility generator: Setdest	- 53 -
Chapter 6 Simulation and performance evaluation.....	- 54 -

6.1 RWP Mobility Model.....	- 54 -
6.2 Simulation setup	- 55 -
6.3 Result.....	- 56 -
Chapter 7 Analysis for OOPFE-Routing	- 63 -
7.1 In 1'st phase (OB).....	- 63 -
7.2 In 2'nd phase (OC)	- 64 -
7.3 In 3'rd phase (PS).....	- 66 -
7.4 Compare with Two-Hop Routing.....	- 66 -
Chapter 8 Using NS2 to Analyze the Packet Drop Problem.....	- 68 -
8.1 Introduction of Packet Drop Problem.....	- 68 -
8.1.1 The problem of buffer queue in DTN	- 68 -
8.1.2 Packet drop problems.....	- 69 -
8.1.3 Dropped packets in ns2.....	- 71 -
8.2 Basic compare with tradition routing method.....	- 72 -
8.3 Advance compare the result in hop-limit is 20	- 72 -
8.4 Conclusions.....	- 79 -
Chapter 9 Using QPN to model two important metrics of routing protocol in DTN.....	- 81 -
9.1 What's PN (Petri Nets)? What's QPN?.....	- 81 -
9.1.1 The define of Petri Nets	- 81 -
9.1.2 The network model of Petri Nets	- 82 -
9.1.3 Queueing theory (Queueing Models).....	- 84 -
9.1.4 QPN is Queueing model + Petri Net model.....	- 85 -
9.1.5 The current simulation tool of QPN.....	- 86 -
9.1.6 The related researches to use PN Model in Ad-Hoc Networks.....	- 87 -
9.2 Using QPN to model routing in RWP mobility	- 87 -
9.2.1 Random Waypoint mobility	- 87 -
9.2.2 The definition of IMT and CT	- 88 -
9.2.3 System Model	- 89 -
9.2.4 To get and analyze the parameters for the IMT and CT in DTN	- 89 -
9.2.4.1 To compare the literatures with our simulation results for IMT	- 89 -
9.2.4.2 To compare the literatures with our simulation results for CT	- 91 -

9.2.5 Using QPN to express the IMT and CT.....	- 92 -
9.3 Using QPN to model the Direct-Routing in DTN .	- 94 -
9.3.1 Consider the link time will be insufficient and need a retransmission mechanism.....	- 95 -
9.3.2 Don't consider the link time will be insufficient	- 98 -
9.4 Using QPN to model two known multi-hop routing in DTN	- 101 -
9.4.1 Using QPN to model 2Hop Routing in DTN....	- 101 -
9.4.2 Using QPN to model Epidemic Routing in DTN-	104 -
9.5 Using QPN to model OOPFE Routing in DTN...	- 107 -
9.5.1 First case, we consider no any neighbor node in "One broadcast" process.....	- 107 -
9.5.1.1 The basic Markov state transition diagram for OOPFE routing.....	- 108 -
9.5.1.2 The method to transfer the Markov state transition diagram into QPN for Latency.....	- 109 -
9.5.1.3 The method to simulate the Delivery ratio in QPN	- 112 -
9.5.2 Second case, we consider the numbers of neighbor nodes in "One broadcast" process	- 119 -
9.5.2.1 The basic Markov state transition diagram for OOPFE routing.....	- 119 -
9.5.2.2 The method to transfer the Markov state transition diagram of OOPFE routing into QPN for Latency.....	- 121 -
9.6 Small Conclusion and Future works.....	- 123 -
Chapter 10 Discussion in OOPFE-Routing	- 125 -
Chapter 11 Conclusions & Future Work.....	- 128 -
References	- 129 -
