

# Contents

## Lecture 1. Introduction

- 1.1. A Quick Introduction
- 1.2. Matrices for Graphs
- 1.3. Spectral Embeddings
- 1.4. Isomorphism
- 1.5. Physical Intuition
- 1.6. The Fiedler Value
- 1.7. Expanders
- 1.8. Approximation of Graphs
- 1.9. Spectra of Random Graphs
- 1.10. Cliques and Graph Coloring
- 1.11. Directed Graphs

## Lecture 2. The Laplacian

- 2.1. Eigenvalues and Eigenvectors
- 2.2. The Laplacian Matrix
- 2.3. Connectivity
- 2.4. Some Fundamental Graphs

## Lecture 3. Fiedler's Theorem on Weighted Path Graphs

## Lecture 4. A Short Visit of the Perron-Frobenius Theory

- 4.1. Adjacency Matrices
- 4.2. The Perron-Frobenius Theorem

## Lecture 5. Courant-Fischer and Graph Coloring

- 5.1. Eigenvalues and Optimization
- 5.2. Graph Coloring and  $\alpha_1$
- 5.3. The Courant-Fischer Theorem
- 5.4. Stable Sets
- 5.5. Hoffman's Bound

## Lecture 6. More on the Laplacian

- 6.1. Eigenvalue Interlacing
- 6.2. The Perron-Frobenius Theorem for Matrices with Non-positive Off-diagonal Entries
- 6.3. Fiedler's Nodal Domain Theorem

- 6.4. The Second Laplacian Eigenvalue
- 6.5. Cutting Graphs
- 6.6. An Integer Program
- 6.7. Bound on  $\lambda_2$
- 6.8. Bound on  $\lambda_n$
- 6.9. The Hypercube
- 6.10. Kronecker Product of Matrices

### **Lecture 7. Graphic Inequalities**

- 7.1. Graphic Inequalities
- 7.2. The Path Inequality
- 7.3. The Complete Binary Tree
- 7.4. More on Connectivity

### **Lecture 8. The Laplacian Revisited**

- 8.1. Properties of  $\lambda_2(G)$
- 8.2. Properties of the Largest Laplacian Eigenvalue
- 8.3. Measure of Irreducibility
- 8.4. Further Lower Bounds for the Algebraic Connectivity
- 8.5. Partition Problems
- 8.6. Fiedler's Nodal Domain Theorem Revisited

### **Lecture 9. Cheeger's Inequality**

- 9.1. Overview
- 9.2. Conductance
- 9.3. The Normalized Laplacian
- 9.4. Cheeger's Inequality
