

「友善」這個字眼很少用來形容建築，甚至用來做為評估建築的標準的，但是從使用者的觀點來看，它卻是個十分必要的原則。經由有組織的行動，使用參與式營造的方法，可以創造使用者、設計者、管理者、決策者之間一個比較好的對話過程，經由這個新的過程，建築的空間可以變得比較友善。

Rarely is the word 'friendly' used to praise or to evaluate architecture. From the perspective of users, such performance in architecture is necessary. Architectural space would be much friendly through a new dialogical process based on organized actions applying participatory design methods. These actions could draw together the users, the designers, the managers and the decision makers.
